Vitamins Package — Customer Journey

April 29, 2026

CONTENTS

Vitamins Package — Customer Journey (A to Z)

Three Customer Types

TYPE 1: Post-Test Lab Customer 🔴 PRIMARY

TYPE 2: Pharmacy Referral Customer 🟡

TYPE 3: Ads Customer 🟢

What EXISTS Today

What's MISSING

GAP 1 — Vitamins Consultation Linked to Vitamins Subscription (Not Lab Bundle)

GAP 2 — Pharmacy Free Vitamins Consultation (Not Counted on Bundle)

GAP 3 — Doctor Sees Full Context (Source, Type, Subscription, Lab Results)

GAP 4 — Admin Dashboard (Subscriber List and Doctor Compliance)

GAP 5 — Prescription Routing to Pharmacy

GAP 6 — Recurring Consultation on Monthly Renewal

GAP 7 — Survey Data Visible to Doctor

GAP 8 — Auto-Send Vitamins Link When Post-Test Consultation Closes

GAP 9 — Bulk Marketing Campaign to Existing Users

Business Deals Required

CONFIDENTIAL

Vitamins Package — Customer Journey (A to Z)

Three Customer Types

> **Priority note**: The post-test lab customer is the PRIMARY and highest-converting customer type. Every part of the build should serve this flow first. The lab customer arrives pre-qualified (has done blood work, already in a consultation with a doctor), making them the most likely to subscribe. Pharmacy and ads customers are secondary channels built on top of the same infrastructure.

Priority	#	Type	Entry Point	Who Pays for Initial Consultation?
🔴 **PRIMARY**	1	**Post-Test Lab**	Lab org portal (post_test consultation)	Lab subscription bundle
🟡 Secondary	2	**Pharmacy Referral**	Pharmacy org portal (free vitamins consultation)	Free — not counted on pharmacy subscription
🟢 Growth	3	**Ads Customer**	TikTok / Instagram / Snap → landing page	Self-pay (vitamins subscription)

TYPE 1: Post-Test Lab Customer 🔴 PRIMARY

1. يزور العميل المختبر لإجراء التحاليل
2. يحصل العميل على استشارة من لاباس بعد ظهور نتائج التحليل (المختبر يرسلها من بوابة المنشأة)
3. يدخل العميل الاستشارة عبر الرابط المرسل على واتساب
4. يراجع الدكتور نتائج التحاليل مع العميل ويناقش حالته الصحية — عند إغلاق الاستشارة يرسل النظام تلقائياً رابط صفحة الفيتامينات إلى العميل
5. يدخل العميل إلى الصفحة، ويقوم بتعبئة المعلومات المطلوبة، ثم إتمام عملية الدفع — *(مشترك)*
6. تصل إلى العميل رسالة تؤكد نجاح الاشتراك، وتتضمن رابطًا للدخول مباشرة إلى استشارة فيتامينات جديدة — *(مشترك)*
7. يدخل العميل إلى الاستشارة الجديدة مباشرة عبر الرابط (ليست الاستشارة الأصلية مع المختبر) — *(مشترك)*
8. **(للأدمن)** تظهر قائمة بجميع المشتركين مع الباقات والاستشارات المنفذة، ويظهر مصدر كل عميل (مختبر / صيدلية / اشتراك مباشر) — بسبب الاتفاقيات مع الشركاء لإعادة عملائهم إليهم — *(مشترك)*
9. **(للدكتور)** يقبل الدكتور الاستشارة ويرى: مصدر العميل، الباقة المفعّلة، إجابات الاستبيان، ونتائج التحاليل الأصلية — تظهر للدكتور حتى لو رفع تحليل المريض في الاستشارة السابقة (post test lab consultation) — *(مشترك)*
10. يُصدر الدكتور وصفة طبية مخصّصة بناءً على كل المعلومات — *(مشترك)*

CONFIDENTIAL

11. **(للأدمن)** يتحقق الأدمن من إرسال الرابط للعميل، ويختار الصيدلية الشريكة ويرسل الوصفة إليها
12. تصل الوصفة مباشرة لمدير الصيدلية — *(مشترك)*

CONFIDENTIAL

#	Participant	Action	Info Seen / Sent / Received
1	**Customer**	Visits the lab and does a blood test.	—
2	**Lab — org portal**	Opens the Labass org portal. Enters the patient's phone number. Selects *post-test* consultation type. Uploads the lab results PDF. Submits.	• Remaining bundle count decreases by 1
3	**System → Customer**	Sends the patient a WhatsApp + SMS with a one-time consultation link.	• Patient receives: link to enter the consultation chat
4	**Customer**	Clicks the link and enters the consultation chat.	—
5	**Doctor**	Sees the new consultation in their feed and accepts it.	• Patient name, phone, consultation type (post-test), lab results PDF • Source label: "من المختبر — [lab name]" *(to be built)* • Whether patient already has an active vitamins subscription *(to be built)*
6	**Doctor ↔ Customer**	Reviews the lab results together. Discusses findings and health status. Recommends a vitamins program.	—
7	**Doctor**	Closes the consultation.	—
8	**System → Customer**	The moment the post-test consultation closes, automatically sends the patient the vitamins package link via WhatsApp.	• Patient receives: "بناءً على نتائج تحاليلك، قد تحتاج لبرنامج فيتامينات مخصّص" + vitamins page link • ⚠️ Requires Meta WhatsApp template approval
9	**Customer**	Visits the vitamins page. Clicks "اشترك الآن". Fills in: name, phone, age, height, weight, city, health goals. Selects a plan (289 SAR/month or 779 SAR/quarter). Verifies phone via OTP. Pays via card or Apple Pay.	—
10	**System** *(to be built)*	Payment confirmed. Subscription activated. Automatically creates a new vitamins consultation and sends the customer a direct entry link (counted against the vitamins subscrip-	• Patient receives: WhatsApp/SMS — "تم الاشتراك بنجاح! ادخل استشارتك الآن" + direct consultation link • Success page shows "ادخل استشارتك

CONFIDENTIAL

#	Participant	Action	Info Seen / Sent / Received
		tion, not the lab's bundle). If WhatsApp delivery fails, falls back to SMS.	الآن" button (replaces current "سيتواصل معك فريقنا")
11	**Customer**	Clicks the link and enters the new vitamins consultation directly.	—
12	**Doctor**	Accepts the vitamins consultation.	• **Source** — where the patient came from (lab / pharmacy / direct). Shown because Labass has agreements with partner labs and pharmacies to bring their customers back — prescription routed accordingly *(to be built)* • **Survey** — every question asked during signup with the patient's answer (health goals, height, weight, city) • **Previous consultations** — the original post-test consultation: lab name, date, and link • **Lab results** — PDF uploaded by the lab during the post-test consultation; displayed here even though it was uploaded in a different consultation
13	**Doctor → Patient**	Reviews all context. Issues a vitamins prescription with specific products and dosages.	• Patient receives: prescription PDF via WhatsApp
14	**Admin** *(to be built)*	Opens the vitamins subscriber dashboard. Sees all active subscribers with their plan, consultation status, and prescription status. Verifies the system sent the vitamins link after the post-test consultation closed. Sees each patient's source to determine prescription routing. Selects a Labass partner pharmacy and sends the prescription.	• Subscriber name, plan, source (lab / pharmacy / direct), consultations completed, prescription status • ✅ vitamins link sent (with timestamp) / ❌ not sent — needs follow-up • Partner pharmacy list to assign to • Pharmacy manager receives: prescription PDF via WhatsApp
15	**Pharmacy Manager**	Receives the prescription. Dispenses the vitamins. Ships to the patient.	—

CONFIDENTIAL

TYPE 2: Pharmacy Referral Customer 🟡

1. يزور العميل الصيدلية (لشراء أدوية أو استفسار عن فيتامينات)
2. الصيدلية ترسل استشارة فيتامينات مجانية من بوابة المنشأة (لا تُخصم من باقة الصيدلية)
3. يحصل العميل على رابط الاستشارة عبر واتساب
4. يدخل العميل الاستشارة، ثم يقوم الدكتور بإرسال رابط صفحة الفيتامينات والاشتراك
5. يدخل العميل إلى الصفحة، ويقوم بتعبئة المعلومات المطلوبة، ثم إتمام عملية الدفع — *(مشترك)*
6. تصل إلى العميل رسالة تؤكد نجاح الاشتراك، وتتضمن كذلك رابطًا لطلب استشارة فيتامينات جديدة — *(مشترك)*
7. يطلب العميل استشارة فيتامينات جديدة مرتبطة بالباقة عبر الرابط المرسل (لا يدخل نفس الاستشارة الأولى) — *(مشترك)*
8. يدخل العميل إلى الاستشارة الجديدة، ثم يقوم الدكتور بإصدار وصفة طبية — *(مشترك)*
9. تظهر الباقة التي اشترك فيها العميل للطبيب داخل تطبيق الدكتور عند قبول الاستشارة — *(مشترك)*
10. **(للأدمن)** تظهر قائمة بالعملاء المشتركين مع الباقات والاستشارات المنفذة — *(مشترك)*
11. يتحقق الأدمن من الروابط المرسلة من الدكتور للعميل (رابط صفحة الفيتامينات) للتأكد من إرسالها
12. يرسل الدكتور الوصفة مباشرة لتلك الصيدلية (الصيدلية المصدر التي أرسلت الاستشارة)
13. ترسل الوصفة مباشرة لمدير الصيدلية — *(مشترك)*

CONFIDENTIAL

#	Participant	Action	Info Seen / Sent / Received
1	**Customer**	Visits a pharmacy. Either asks about vitamins or the pharmacist proactively recommends the Labass vitamins program.	—
2	**Pharmacy — org portal** *(to be built)*	Opens the Labass org portal. Enters the patient's phone number. Selects "فيتامينات" as the consultation type. Submits.	• "استشارة الفيتامينات مجانية ولا تُخصم من باقتك" • Bundle count does **not** decrease
3	**System → Customer**	Sends the patient a WhatsApp with a consultation link, referencing the pharmacy by name.	• Patient receives: "صيدلية [اسم الصيدلية] ترشّح لك برنامج الفيتامينات من لاباس" + consultation link
4	**Customer**	Clicks the link and enters the consultation chat.	—
5	**Doctor**	Accepts the consultation.	• 🟢 "فيتامينات" badge • Source: "من الصيدلية — [pharmacy name]" • No lab results • Not yet subscribed to a vitamins package *(to be built)*
6	**Doctor ↔ Customer**	Discusses the patient's health concerns, symptoms, and lifestyle. Recommends a vitamins program. Sends the vitamins package link in the chat.	—
7	**Doctor**	Closes the consultation.	—
8	**Customer**	Visits the vitamins page. Fills in personal info and health goals. Selects a plan. Verifies phone via OTP. Pays.	—
9	**System** *(to be built)*	Payment confirmed. Subscription activated. System sends customer a link to request a new vitamins consultation at any time during their subscription period. If WhatsApp delivery fails, falls back to SMS.	• Patient receives: WhatsApp/SMS — "تم الاشتراك بنجاح! يمكنك طلب استشارة جديدة في أي وقت يناسبك" + consultation request link
10	**Customer**	Clicks the link and requests a new vitamins consultation linked to their subscription.	—

CONFIDENTIAL

#	Participant	Action	Info Seen / Sent / Received
		Enters the consultation once it has been created.	
11	**Doctor**	Accepts the vitamins consultation.	• 🟢 "فيتامينات" badge • Source: "من الصيدلية — [pharmacy name]" • Subscription plan + active status • Health goals + physical info from signup • No lab results *(to be built)*
12	**Doctor → Patient**	Reviews context. Issues a vitamins prescription.	• Patient receives: prescription PDF via WhatsApp
13	**Doctor → Pharmacy** *(to be built)*	Since the patient came from this pharmacy, the doctor sends the prescription directly to the source pharmacy. No admin involvement needed.	• Pharmacy manager receives: prescription PDF via WhatsApp
14	**Pharmacy Manager**	Receives the prescription. Dispenses the vitamins. Ships to the customer.	—

TYPE 3: Ads Customer 🟢

1. يرى العميل إعلاناً على تيك توك أو انستقرام أو سناب شات
2. يدخل العميل مباشرة إلى صفحة الفيتامينات عبر رابط الإعلان
3. يقوم بتعبئة المعلومات المطلوبة، ثم إتمام عملية الدفع — *(مشترك)*
4. تصل إلى العميل رسالة تؤكد نجاح الاشتراك، وتتضمن كذلك رابطًا لطلب استشارة فيتامينات جديدة — *(مشترك)*
5. يطلب العميل استشارة فيتامينات جديدة مرتبطة بالباقة عبر الرابط المرسل (لا يدخل نفس الاستشارة الأولى) — *(مشترك)*
6. يدخل العميل إلى الاستشارة الجديدة، ثم يقوم الدكتور بإصدار وصفة طبية — *(مشترك)*
7. تظهر الباقة التي اشترك فيها العميل للطبيب داخل تطبيق الدكتور عند قبول الاستشارة — *(مشترك)*
8. **(للأدمن)** تظهر قائمة بالعملاء المشتركين مع الباقات والاستشارات المنفذة — *(مشترك)*
9. يتحقق الأدمن من الروابط المرسلة من الدكتور للعميل (رابط صفحة الفيتامينات) للتأكد من إرسالها
10. يقوم الأدمن باختيار صيدلية شريكة متعاقدة مع لاباس لبيع الفيتامينات ثم يرسل الوصفة
11. ترسل الوصفة مباشرة لمدير الصيدلية — *(مشترك)*

CONFIDENTIAL

#	Participant	Action	Info Seen / Sent / Received
1	**Customer**	Sees an ad on TikTok, Instagram, or Snap. Clicks and lands on the vitamins page.	—
2	**Customer**	Reads about the program — symptoms covered, what's included, pricing, FAQ. Clicks "اشترك الآن". Fills in: name, phone, age, height, weight, city, health goals. Selects a plan. Verifies phone via OTP. Pays via card or Apple Pay.	—
3	**System** *(to be built)*	Payment confirmed. Subscription activated. System sends customer a link to request a new vitamins consultation at any time during their subscription period. If WhatsApp delivery fails, falls back to SMS.	• Patient receives: WhatsApp/SMS — "تم الاشتراك بنجاح! يمكنك طلب استشارة جديدة في أي وقت يناسبك" + consultation request link • Success page shows an "اطلب استشارتك الآن" button
4	**Customer**	Clicks the link and requests a new vitamins consultation linked to their subscription. Enters the consultation once it has been created.	—
5	**Doctor**	Accepts the consultation.	• 🟢 "فيتامينات" badge • Source: "اشتراك مباشر" (came via ads or landing page) • Subscription plan + active status • Health goals + physical info from signup • No lab results *(to be built)*
6	**Doctor → Patient**	Reviews health goals and context. Issues a vitamins prescription with specific products and dosages.	• Patient receives: prescription PDF via WhatsApp
7	**Admin** *(to be built)*	Opens the vitamins subscriber dashboard. Finds this patient (no linked pharmacy). Selects a Labass partner pharmacy from the list. Sends the prescription to the pharmacy.	• All active subscribers (name, plan, status) • Patients with no assigned pharmacy highlighted for action • Per subscriber: consultations completed, prescription status • Partner pharmacy list to

What’s MISSING

GAP 1 — VITAMINS CONSULTATION LINKED TO VITAMINS SUBSCRIPTION (NOT LAB BUNDLE)

Problem: After paying for the vitamins subscription, the success page says “سيتواصل معك فريقنا خلال ٢٤ ساعة”. There is no consultation link. The patient has no way to start a consultation.

What we need:

1. When a vitamins subscription is activated, a consultation is automatically created and linked to the **vitamins subscription** — not the lab’s bundle. This does not count against the lab’s consultation count.
2. The patient receives a link valid until the subscription expires (not the current 72h default).
3. The patient can request additional consultations within the subscription period, counted against the vitamins package — not any org bundle.
4. The success page shows a direct “ادخل للاستشارة الآن” button.

Backend: On subscription activation: create a vitamins consultation, generate a long-lived link, send it via WhatsApp. Additional consultations within the period deduct from the vitamins subscription.

Frontend: Success page — replace “سيتواصل معك فريقنا خلال ٢٤ ساعة” with a direct consultation link and “يمكنك الدخول للاستشارة في أي وقت يناسبك”.

GAP 2 — PHARMACY FREE VITAMINS CONSULTATION (NOT COUNTED ON BUNDLE)

Problem: When a pharmacy sends a consultation from the org portal, it always deducts from their bundle. There is no free vitamins referral option.

What we need:

- A new “فيتامينات” consultation type in the org portal. When selected, the consultation is created and sent to the patient at no cost to the pharmacy’s bundle. The pharmacy’s remaining count does not change.
- A note shown to the pharmacy when “فيتامينات” is selected: “مجانية ولا تُخصم من باقتك”.

Backend: “Vitamins” consultation type bypasses bundle deduction logic.

CONFIDENTIAL

Frontend (org portal): Add “فيتامينات” as a selectable consultation type; show free note; do not decrement the displayed remaining count.

GAP 3 — DOCTOR SEES FULL CONTEXT (SOURCE, TYPE, SUBSCRIPTION, LAB RESULTS)

Problem: When a doctor accepts a consultation, they see only the patient’s basic profile — no consultation type, no source, no subscription status.

What we need: Every vitamins-related consultation must show the doctor:

What	Why
Vitamins consultation badge	Doctor knows to focus on vitamins prescription
Where the patient came from (lab / pharmacy / direct)	Lab patient has test results; pharmacy patient was referred
Active vitamins subscription + plan name	Doctor confirms the patient is subscribed before prescribing
Patient’s health goals, height, weight, city	Filled during signup — essential for personalized prescription
Lab results PDF (if applicable)	Doctor must review actual test results

Backend: Consultation must carry its origin and a reference to the patient’s vitamins subscription. Doctor feed must expose this data.

Frontend (doctor app): Consultation card and detail view must display source badge, subscription status, survey answers, and lab results PDF link.

GAP 4 — ADMIN DASHBOARD (SUBSCRIBER LIST AND DOCTOR COMPLIANCE)

Problem: There is no admin view for vitamins subscribers, their packages, or the status of their consultations and prescriptions.

What we need: Admin must see:

- All patients subscribed to a vitamins package, with plan and subscription status.
- Per subscriber: consultations completed, prescription issued or pending.

CONFIDENTIAL

- Whether the doctor sent the vitamins link to the patient during the post-test consultation (✅ / ❌ with timestamp).

Backend: Admin-accessible view of all vitamins subscriptions with consultation and prescription history. Detect and record when a doctor sends the vitamins link in a consultation.

Frontend (admin): Table with subscriber, plan, consultation status, prescription status, and doctor compliance indicator.

GAP 5 — PRESCRIPTION ROUTING TO PHARMACY

Problem: The prescription PDF auto-sends to the marketer who initiated the consultation. For lab and ads customers, there is no marketer — so the prescription has no destination pharmacy.

What we need:

Path A — Patient came from a pharmacy: Doctor sends the prescription directly to that same pharmacy. No admin needed.

Path B — Patient came from a lab or ads: Admin selects a Labass partner pharmacy from a list and sends the prescription. Admin must see which consultations are waiting for pharmacy assignment.

Backend: Flag pharmacy organizations as “vitamin fulfillment partners”. Allow admin to send a prescription to any partner pharmacy. Allow doctor to send Rx directly to the linked pharmacy (Path A).

Frontend — Doctor app (Path A): Show “أرسل الوصفة للصيدلية” action when consultation source is a pharmacy.

Frontend — Admin (Path B): Show pending prescriptions with no assigned pharmacy; allow admin to pick a partner pharmacy and send.

GAP 6 — RECURRING CONSULTATION ON MONTHLY RENEWAL

Problem: When a vitamins subscription renews, nothing happens. The patient receives no notification and no new consultation is created.

What we need: When a subscription renews, a new consultation is automatically created and the patient receives a WhatsApp prompt to book their monthly consultation.

CONFIDENTIAL

Backend: On renewal event: create a new consultation and notify the patient.

GAP 7 — SURVEY DATA VISIBLE TO DOCTOR

Problem: The subscribe wizard collects health goals, height, weight, and city. This data is stored only in the browser and never reaches the backend or the doctor.

What we need: The doctor must see this data when accepting the vitamins consultation.

Backend: Store survey answers from the subscribe wizard against the patient's consultation or subscription record.

Frontend (subscribe): Submit survey data to the backend at the payment/confirmation step.

Frontend (doctor app): Display survey answers in the consultation view.

GAP 8 — AUTO-SEND VITAMINS LINK WHEN POST-TEST CONSULTATION CLOSES

Problem: When a post-test lab consultation is closed, nothing is sent about vitamins. The doctor must manually remember to send the link.

What we need: Every time a post-test consultation closes, the system automatically sends the patient the vitamins package link via WhatsApp. This is a safety net in case the doctor forgot.

Message: based on your lab results, you may benefit from a customized vitamins program — here is the link.

Backend: When a post-test consultation closes, auto-send vitamins link to patient via WhatsApp.

⚠️ Requires an approved WhatsApp message template with Meta before this can run.

GAP 9 — BULK MARKETING CAMPAIGN TO EXISTING USERS

Problem: There is no way to reach existing Labass patients who have not yet subscribed to a vitamins package.

What we need: Admin can trigger a bulk WhatsApp campaign sending the vitamins package link to all patients in the database who do not already have an active vitamins subscription. The system must handle rate limits, track results (sent / failed / skipped), and never re-send to exist-

CONFIDENTIAL

ing subscribers.

Backend: Admin-triggered bulk send with rate limiting and result logging; exclude active vitamin subscribers.

Frontend (admin): Trigger button with confirmation showing the number of users to be contacted; results summary after send.

⚠️ Requires a separate approved WhatsApp marketing template with Meta.

Business Deals Required

> These agreements must be in place before the technical flow can operate.

CONFIDENTIAL

#	Deal	Unlocks	Status Needed Before
1	**Lab subscription agreements** — Labs pay Labass for a consultation bundle. Each post-test result generates a consultation via the bundle.	🔴 Lab customer flow	Sprint 1
2	**Partner pharmacy fulfillment agreement** — **جدار (Jadar)** is the first partner pharmacy. Jadar is registered in the system as a pharmacy so the admin can send prescriptions and patient information directly to them. Additional pharmacies can be added later. Must define: delivery area, turnaround time, revenue share or wholesale price.	🔴 Lab + 🟢 Ads (Rx delivery — GAP 5)	Sprint 1
3	**Vitamin supplier / product agreement** — Agreement with the vitamins manufacturer or distributor. Defines which products can be prescribed, pricing, and supply chain. Without this, doctors cannot prescribe specific products.	🔴 All flows	Sprint 1
4	**Pharmacy referral agreement** — Pharmacies agree to use the Labass org portal to send free vitamins consultations as referrals to their customers. Must clarify: who onboards pharmacies, bundle pricing, terms of the free referral consultation.	🟡 Pharmacy flow (GAP 2)	Sprint 2
5	**WhatsApp Business template approvals** — Meta must approve two marketing templates: `vitamins_marketing_post_test` (sent when post-test closes) and `vitamins_marketing_campaign` (bulk campaign). Approval takes 1–3 business days.	🔴 GAP 8 (template 1), 🟢 GAP 9 (template 2)	Sprint 1 (template 1), Sprint 3 (template 2)
6	**SFDA / MOH compliance** — Confirm whether an e-prescription is sufficient for vitamin dispensing or if physical pharmacy verification is required.	🔴 All prescription flows	Before any prescription is sent to a pharmacy

CONFIDENTIAL
