

Vitamins Package — Customer Journey (A to Z)

Customer Types

Phase Rule: Phase 1 is exclusively for customers who **already have existing blood results** — the doctor reviews them and prescribes without ordering a new test.

Phase 1 customer type (customer brings existing blood results — no lab test in package):

- **Lab Customer (Post-Test)** — arrives with existing blood results from their own independent lab visit. Package does not include a new test. Doctor reviews the results and prescribes.

Current  **(no lab test required):**

- **Pharmacy Referral — No Lab Test** — pharmacy refers patient directly. Doctor prescribes vitamins based on symptoms, health goals, and clinical assessment. Viable and available now.

Phase 2 customer types (lab test must be bundled in the package):

- **Ads Customer** — no existing blood results. Requires a lab test in the package — Phase 2.
- **Lab Customer (Pre-Test)** — does not have results yet. The vitamins package for this customer type **MUST** include a lab test — Phase 2.
- **Pharmacy Referral — With Lab Test** — doctor orders a home blood test within the package. Phase 2 and **highly unlikely in practice** — pharmacies rarely have the infrastructure to coordinate a bundled home test.

Priority	#	Customer Type	Phase	Entry Point	Who Pays (Initial Consult)
Primary	1	Lab Customer (Post-Test)	Phase 1	Lab org portal — patient brings existing blood results, no new test ordered	Lab subscription bundle
Secondary	2	Ads Customer	Phase 2	TikTok / Instagram / Snap → landing page → lab test bundled in package	Self-pay (vitamins subscription)
Secondary	3	Lab Customer (Pre-Test)	Phase 2	Lab org portal — no results yet; vitamins package + lab test run → doctor prescribes	Lab subscription bundle
Growth	4	Pharmacy Referral — No Lab Test	Current	Pharmacy org portal — doctor prescribes based on symptoms and health goals	Pharmacy subscription bundle
Unlikely	5	Pharmacy Referral — With Lab Test	Phase 2	Pharmacy org portal → home blood test bundled — highly unlikely in practice	Package pricing (Phase 2)

TYPE 1 PRIMARY (Phase 1): Patient Visits Lab → Gets Post-Test Consultation → Doctor Reviews Existing Blood Results → Prescribes Vitamins

The patient visits the lab independently, gets their blood work done, and arrives at the Labass consultation with those results in hand. The vitamins package does **NOT** include ordering a new lab test — the doctor uses the existing results to prescribe. This is the highest-converting customer type because the need is already proven by data.

1. يزور العميل المختبر ويجري تحاليل الدم
2. يحصل العميل على استشارة post-test من لابس — المختبر يرسلها من بوابة المنشأة بعد رفع نتائج التحاليل
3. يدخل العميل الاستشارة عبر الرابط المرسل على واتساب
4. يراجع الدكتور نتائج التحاليل مع العميل — عند إغلاق الاستشارة يرسل النظام تلقائياً رابط صفحة الفيتامينات إلى العميل
5. يدخل العميل إلى الصفحة، ويقوم بتعبئة المعلومات المطلوبة، ثم إتمام عملية الدفع — (مشارك)
6. تصل إلى العميل رسالة تؤكد نجاح الاشتراك، وتتضمن رابطاً للدخول مباشرة إلى استشارة فيتامينات جديدة — (مشارك)
7. يدخل العميل إلى الاستشارة الجديدة مباشرة عبر الرابط (ليست الاستشارة الأصلية مع المختبر) — (مشارك)

8. **(للأدمن)** تظهر قائمة بجميع المشتركين مع الباقات والاستشارات المنفذة، ويظهر مصدر كل عميل (مختبر / صيدلية / اشتراك مباشر) — بسبب الاتفاقيات مع الشركاء لإعادة عملاتهم إليهم — (مشترك)
9. **(للدكتور)** يقبل الدكتور الاستشارة ويرى: مصدر العميل، الباقة المفصلة، إجابات الاستبيان، ونتائج التحاليل الأصلية — تظهر للدكتور حتى لو رفع تحليل المريض في الاستشارة السابقة (post test lab consultation) — (مشترك)
10. يُصدر الدكتور وصفة طبية مخصصة بناءً على كل المعلومات — (مشترك)
11. **(للأدمن)** يتحقق الأدمن من إرسال الرابط للعميل، ويختار الصيدلية الشريكة ويرسل الوصفة إليها
12. تصل الوصفة مباشرة لمدير الصيدلية — (مشترك)

#	Participant	Function	Action	Info Seen / Sent / Received
1	Customer	B2B	Visits the lab and does a blood test.	—
2	Lab — org portal	B2B	Opens the Labass org portal. Enters the patient's phone number. Selects <i>post-test</i> consultation type. Uploads the lab results PDF. Submits.	• Remaining bundle count decreases by 1
3	System → Customer	Tech	Sends the patient a WhatsApp + SMS with a one-time consultation link.	• Patient receives: link to enter the consultation chat
4	Customer	Tech	Clicks the link and enters the consultation chat.	—
5	Doctor	Medical	Sees the new consultation in their feed and accepts it.	• Patient name, phone, consultation type (post-test), lab results PDF • Source label: “من المختبر — [lab name]” (to be built) • Whether patient already has an active vitamins subscription (to be built)
6	Doctor ↔ Customer	Medical	Reviews the lab results together. Discusses findings and health status. Recommends a vitamins program.	—
7	Doctor	Medical	Closes the consultation.	—
8	System → Customer	Marketing	The moment the post-test lab consultation closes, automatically sends the patient the vitamins package link via WhatsApp.	• Message: “بناءً على نتائج تحاليلك،” + “قد تحتاج لبرنامج فيتامينات مخصص” + vitamins page link • ⚠ Requires Meta WhatsApp template approval
9	Customer	Sales	Visits the vitamins page. Clicks “اشترك الآن”. Fills in: name, phone, age, height, weight, city, health goals. Selects a plan (289 SAR/month or 779 SAR/quarter). Verifies phone via OTP. Pays via card or Apple Pay.	—

#	Participant	Function	Action	Info Seen / Sent / Received
10	System <i>(to be built)</i>	Tech	Payment confirmed. Subscription activated. Automatically creates a new vitamins consultation and sends the customer a direct entry link (counted against the vitamins subscription, not the lab's bundle). If WhatsApp delivery fails, falls back to SMS.	• Patient receives: WhatsApp/SMS — تم الاشتراك “ادخل استشارتك الآن” + direct consultation link • Success page shows “ادخل استشارتك الآن” button (replaces current “سيواصل معك فريقنا”)
11	Customer	Tech	Clicks the link and enters the new vitamins consultation directly.	—
12	Doctor	Medical	Accepts the vitamins consultation.	• Source — where the patient came from (lab / pharmacy / direct). Shown because Labass has agreements with partner labs and pharmacies to bring their customers back — prescription routed accordingly <i>(to be built)</i> • Survey — every question asked during signup with the patient's answer (health goals, height, weight, city) • Previous consultations — the original post-test lab consultation: lab name, date, and link • Lab results — PDF uploaded by the lab, displayed here even though it was uploaded in the original consultation
13	Doctor → Patient	Medical	Reviews all context. Issues a vitamins prescription with specific products and dosages.	• Patient receives: prescription PDF via WhatsApp
14	Admin <i>(to be built)</i>	Ops	Opens the vitamins subscriber dashboard. Sees all active subscribers with their plan, consultation status, and prescription status. Verifies the	• Subscriber name, plan, source (lab / pharmacy / direct), consultations completed, prescription status

#	Participant	Function	Action	Info Seen / Sent / Received
			system sent the vitamins link after the post-test consultation closed. Sees each patient's source to determine prescription routing. Selects a Labass partner pharmacy and sends the prescription.	•  vitamins link sent (with timestamp) /  not sent — needs follow-up • Partner pharmacy list to assign to • Pharmacy manager receives: prescription PDF via WhatsApp
15	Pharmacy Manager	Ops	Receives the prescription. Dispenses the vitamins. Ships to the patient.	—

TYPE 5 (Current): Pharmacy Refers Patient → Doctor Prescribes Vitamins Based on Symptoms & Health Goals (No Lab Test)

Available now. The pharmacy refers the patient without blood results. The doctor conducts a consultation based on the patient's symptoms, health goals, height, weight, and lifestyle. A vitamins prescription is issued using clinical judgment rather than lab data. The prescription routes back to the referring pharmacy.

1. يزور العميل الصيدلية (لشراء أدوية أو استفسار عن فيتامينات)
2. الصيدلية ترسل استشارة فيتامينات مجانية من بوابة المنشأة (لا تُخصم من باقة الصيدلية)
3. يحصل العميل على رابط الاستشارة عبر واتساب
4. يدخل العميل الاستشارة، ثم يقوم الدكتور بإرسال رابط صفحة الفيتامينات والاشتراك بناءً على الأعراض والأهداف الصحية فقط — لا يوجد تحليل دم في هذه المرحلة
5. يدخل العميل إلى الصفحة، ويقوم بتعبئة المعلومات المطلوبة، ثم إتمام عملية الدفع — (مشارك)
6. تصل إلى العميل رسالة تؤكد نجاح الاشتراك، وتتضمن كذلك رابطاً لطلب استشارة فيتامينات جديدة — (مشارك)
7. يطلب العميل استشارة فيتامينات جديدة مرتبطة بالباقة عبر الرابط المرسل (لا يدخل نفس الاستشارة الأولى) — (مشارك)
8. يدخل العميل إلى الاستشارة الجديدة، ثم يقوم الدكتور بإصدار وصفة طبية بناءً على الأعراض والأهداف الصحية — (مشارك)
9. تظهر الباقة التي اشترك فيها العميل للطبيب داخل تطبيق الدكتور عند قبول الاستشارة — (مشارك)
10. (للأدمن) تظهر قائمة بالعملاء المشتركين مع الباقات والاستشارات المنفذة، ويظهر مصدر كل عميل — (مشارك)
11. يتحقق الأدمن من الروابط المرسلة من الدكتور للعميل للتأكد من إرسالها
12. يرسل الدكتور الوصفة مباشرة لتلك الصيدلية (الصيدلية المصدر التي أرسلت الاستشارة)
13. ترسل الوصفة مباشرة لمدير الصيدلية — (مشارك)

#	Participant	Function	Action	Info Seen / Sent / Received
1	Customer	B2B	Visits a pharmacy. Either asks about vitamins or the pharmacist proactively recommends the Labass vitamins program.	—
2	Pharmacy — org portal (to be built)	B2B	Opens the Labass org portal. Enters the patient's phone number. Selects “فيتامينات” as the consultation type. Submits.	• استشارة الفيتامينات مجانية ولا تُخصم “من باقتك” • Bundle count does not decrease
3	System → Customer	Tech	Sends the patient a WhatsApp with a consultation link, referencing the pharmacy by name.	• Patient receives: صيدلية [اسم: الصيدلية] ترشح لك برنامج الفيتامينات + consultation link “من لابس”
4	Customer	Tech	Clicks the link and enters the consultation chat.	—
5	Doctor	Medical	Accepts the consultation.	•  “فيتامينات” badge • Source: “من الصيدلية” — [pharmacy name]” • No lab results — Phase 1 consultation-only flow • Not yet subscribed to a vitamins package (to be built)
6	Doctor ↔ Customer	Medical	Discusses the patient's health concerns, symptoms, and lifestyle. Recommends a vitamins program based on symptom profile only. Sends the vitamins package link in the chat.	—
7	Doctor	Medical	Closes the consultation.	—
8	Customer	Sales	Visits the vitamins page. Fills in personal info and health goals. Selects a plan. Verifies phone via OTP. Pays.	—
9	System (to be built)	Tech	Payment confirmed. Subscription activated. System sends customer	• Patient receives: WhatsApp/SMS — تم الاشتراك “بنجاح! يمكنك طلب استشارة جديدة في

			a link to request a new vitamins consultation.	”أي وقت يناسبك” + consultation request link
10	Customer	Tech	Enters a new vitamins consultation linked to their subscription.	—
11	Doctor	Medical	Accepts the vitamins consultation. Reviews symptom profile. Issues a vitamins prescription.	• 🟢 “فيتامينات” badge • Source: “من الصيدلية” — [pharmacy name]” • Subscription plan + active status • Health goals + physical info from signup • No lab results — Phase 1 <i>(to be built)</i>
12	Doctor → Patient	Medical	Issues a vitamins prescription based on symptoms and health goals.	• Patient receives: prescription PDF via WhatsApp
13	Doctor → Pharmacy <i>(to be built)</i>	Medical	Sends the prescription directly to the source pharmacy.	• Pharmacy manager receives: prescription PDF via WhatsApp
14	Pharmacy Manager	Ops	Receives the prescription. Dispenses the vitamins. Ships to the customer.	—

TYPE 3 🧠 Phase 2: Patient Visits Lab Before Results Are Ready → Vitamins Package Must Include a Lab Test — Not Yet Built

🚧 **Phase 2 — Not yet implemented.** The pre-test lab customer visits the lab before their results are ready. In Phase 1, we send them the vitamins link after the consultation closes, but cannot prescribe vitamins without blood results. In Phase 2, the vitamins package for this customer type **includes the lab test** — the patient subscribes, the lab test is ordered and run, results come in, and the doctor prescribes the appropriate vitamins based on actual blood data.

What changes vs Phase 1	Details
Package price increases to cover lab test	Lab test cost bundled into subscription pricing
Patient subscribes first, lab test ordered from within the vitamins package	Requires integration between the vitamins subscription and the lab ordering flow
Lab runs panel and uploads results	Doctor receives vitamins consultation + lab results together
Doctor prescribes based on actual blood results	Clinically superior to symptom-only prescription

TYPE 4 🧙 Phase 2 (Highly Unlikely): Pharmacy Refers Patient → Doctor Orders Home Blood Test Within Vitamins Package — Not Yet Built

🚧 **Phase 2 — Not yet implemented, and highly unlikely in practice.** In theory, after the initial pharmacy referral consultation, the doctor orders a home blood test as part of the vitamins subscription. The lab (currently Jadar) collects the sample at home, runs the panel, and uploads results to Labass. In practice, pharmacies rarely have the coordination infrastructure to support a bundled home test — most pharmacy-referred patients will follow TYPE 5 (no lab test) instead. **No implementation date set.**

What changes in Phase 2	Details
Package price increases to cover lab test	Lab test cost bundled into subscription pricing
Doctor orders home lab test from within the consultation	Requires “إرسال للمختبر” feature in doctor app + home collection agreement with Jadar
Lab uploads results to Labass org portal	Via “طلبات التحليل” tab (built, awaiting backend)
Doctor receives free post-test consultation	Not deducted from any package — same lab referral backend (<code>POST /consultations/create-from-referral</code>)
Prescription refined based on actual blood results	Higher clinical accuracy, better outcomes

TYPE 2 🌟 Phase 2: Customer Finds Ad (TikTok/Instagram) → No Blood Results → Must Include Lab Test in Package Before Doctor Can Prescribe — Not Yet Built

🌟 **Phase 2 — Not yet implemented:** Vitamins cannot be responsibly prescribed without blood results. An ads customer without existing blood work requires a lab test as part of the package before the doctor can prescribe. This flow is planned for Phase 2 when lab testing is bundled into the subscription pricing.

1. يرى العميل إعلاناً على تيك توك أو انستغرام أو سناب شات
2. يدخل العميل مباشرة إلى صفحة الفيتامينات عبر رابط الإعلان
3. يقوم بتعبئة المعلومات المطلوبة، ثم إتمام عملية الدفع — (مشترك)
4. تصل إلى العميل رسالة تؤكد نجاح الاشتراك، وتتضمن كذلك رابطاً لطلب استشارة فيتامينات جديدة — (مشترك)
5. يطلب العميل استشارة فيتامينات جديدة مرتبطة بالباقة عبر الرابط المرسل (لا يدخل نفس الاستشارة الأولى) — (مشترك)
6. يدخل العميل إلى الاستشارة الجديدة، ثم يقوم الدكتور بإصدار وصفة طبية بناءً على الأعراض والأهداف الصحية — لا يوجد تحليل دم في هذه المرحلة — (مشترك)
7. تظهر الباقة التي اشترك فيها العميل للطبيب داخل تطبيق الدكتور عند قبول الاستشارة — (مشترك)
8. 🚧 Phase 2 — عند الحاجة لتحاليل مخبرية في المرحلة القادمة يرسل الدكتور معلومات المريض لمدير المختبر — هذه الخطوة غير مفعلة حالياً
9. 🚧 Phase 2 — تابع) يُجري المختبر التحليل ويرفع النتائج — هذه الخطوة غير مفعلة حالياً
10. (للأدمن) تظهر قائمة بالعملاء المشتركين مع الباقيات والاستشارات المنفذة، ويظهر مصدر كل عميل (مختبر / صيدلية / اشتراك مباشر) — (مشترك)
11. يتحقق الأدمن من الروابط المرسله من الدكتور للعميل (رابط صفحة الفيتامينات) للتأكد من إرسالها
12. يقوم الأدمن باختيار صيدلية شريكة متعاقد مع لابس لبيع الفيتامينات ثم يرسل الوصفة
13. ترسل الوصفة مباشرة لمدير الصيدلية — (مشترك)

#	Participant	Function	Action	Info Seen / Sent / Received
1	Customer	Marketing	Sees an ad on TikTok, Instagram, or Snap. Clicks and lands on the vitamins page.	—
2	Customer	Sales	Reads about the program — symptoms covered, what's included, pricing, FAQ. Clicks "اشترك الآن". Fills in: name, phone, age, height, weight, city, health goals. Selects a plan. Verifies phone via OTP. Pays via card or Apple Pay.	—
3	System (to be built)	Tech	Payment confirmed. Subscription activated. System sends customer a link to request a new vitamins consultation at any time during their subscription period. If WhatsApp delivery fails, falls back to SMS.	• Patient receives: WhatsApp/SMS — "تم الاشتراك بنجاح! يمكنك طلب استشارة جديدة في أي وقت يناسبك" + consultation request link • Success page shows an "اطلب استشارتك الآن" button
4	Customer	Tech	Clicks the link and requests a new vitamins consultation linked to their subscription. Enters the consultation once it has been created.	—
5	Doctor	Medical	Accepts the consultation.	• 🟢 "فيتامينات" badge • Source: "اشترك مباشر" (came via ads or landing page) • Subscription plan + active status • Health goals + physical info from signup • No lab results (to be built)
5a 🚑 Phase 2	Doctor → Lab	Medical	If lab tests are needed: Doctor clicks "إرسال للمختبر". Enters lab	• Lab manager receives WhatsApp: patient name,

#	Participant	Function	Action	Info Seen / Sent / Received
— <i>not in current build</i>	Manager		name + manager phone number. Submits.	patient phone, doctor's note • System logs: lab_referral_id, lab_name, lab_manager_phone, sent_at, consultation_id, doctor_name
5b (🚧) <i>Phase 2 — not in current build</i>	Lab Manager	B2B	Receives the referral WhatsApp. Contacts the patient. Collects blood sample. Runs the tests. Opens Labass org portal → “طلبات التحليل” tab. Finds the referral. Uploads lab results PDF. Clicks “إرسال الاستشارة للدكتور”.	• Post-test consultation created — NOT deducted from any package • Patient receives WhatsApp link to enter the consultation • Referral log: status → completed, postTestConsultationId recorded
5c (🚧) <i>Phase 2 — not in current build</i>	Doctor	Medical	Receives the post-test consultation (normal feed). Reviews the lab results PDF. Now has complete picture for a personalised vitamins prescription.	—
6	Doctor → Patient	Medical	Reviews health goals and context. Issues a vitamins prescription with specific products and dosages.	• Patient receives: prescription PDF via WhatsApp
7	Admin (to be built)	Ops	Opens the vitamins subscriber dashboard. Finds this patient (no linked pharmacy). Selects a Labass partner pharmacy from the list. Sends the prescription to the pharmacy.	• All active subscribers (name, plan, source: lab / pharmacy / direct , status) • Patients with no assigned pharmacy highlighted for action • Per subscriber: consultations completed, prescription status • Partner pharmacy list to choose from

#	Participant	Function	Action	Info Seen / Sent / Received
				• Pharmacy manager receives: prescription PDF via WhatsApp
8	Pharmacy Manager	Ops	Receives the prescription. Dispenses the vitamins. Ships to the customer.	—

What's MISSING

GAP 1 — VITAMINS CONSULTATION LINKED TO VITAMINS SUBSCRIPTION (NOT LAB BUNDLE)

Problem: After paying for the vitamins subscription, the success page says “سيواصل معك فريقنا خلال ٢٤ ساعة”. There is no consultation link. The patient has no way to start a consultation.

What we need:

1. When a vitamins subscription is activated, a consultation is automatically created and linked to the **vitamins subscription** — not the lab's bundle. This does not count against the lab's consultation count.
2. The patient receives a link valid until the subscription expires (not the current 72h default).
3. The patient can request additional consultations within the subscription period, counted against the vitamins package — not any org bundle.
4. The success page shows a direct “ادخل للاستشارة الآن” button.

Backend: On subscription activation: create a vitamins consultation, generate a long-lived link, send it via WhatsApp. Additional consultations within the period deduct from the vitamins subscription.

Frontend: Success page — replace “سيواصل معك فريقنا خلال ٢٤ ساعة” with a direct consultation link and “يمكنك الدخول للاستشارة في أي وقت يناسبك”.

GAP 2 — PHARMACY FREE VITAMINS CONSULTATION (NOT COUNTED ON BUNDLE)

Problem: When a pharmacy sends a consultation from the org portal, it always deducts from their bundle. There is no free vitamins referral option.

What we need:

- A new “فيتامينات” consultation type in the org portal. When selected, the consultation is created and sent to the patient at no cost to the pharmacy's bundle. The pharmacy's remaining count does not change.
- A note shown to the pharmacy when “فيتامينات” is selected: “مجانية ولا تُخصم من باقتك”.

Backend: “Vitamins” consultation type bypasses bundle deduction logic.

Frontend (org portal): Add “فيتامينات” as a selectable consultation type; show free note; do not decrement the displayed remaining count.

GAP 3 — DOCTOR SEES FULL CONTEXT (SOURCE, TYPE, SUBSCRIPTION, LAB RESULTS)

Problem: When a doctor accepts a consultation, they see only the patient’s basic profile — no consultation type, no source, no subscription status.

What we need: Every vitamins-related consultation must show the doctor:

What	Why
Vitamins consultation badge	Doctor knows to focus on vitamins prescription
Where the patient came from (lab / pharmacy / direct)	Lab patient has test results; pharmacy patient was referred
Active vitamins subscription + plan name	Doctor confirms the patient is subscribed before prescribing
Patient’s health goals, height, weight, city	Filled during signup — essential for personalized prescription
Lab results PDF (if applicable)	Doctor must review actual test results

Backend: Consultation must carry its origin and a reference to the patient’s vitamins subscription. Doctor feed must expose this data.

Frontend (doctor app): Consultation card and detail view must display source badge, subscription status, survey answers, and lab results PDF link.

GAP 4 — ADMIN DASHBOARD (SUBSCRIBER LIST AND DOCTOR COMPLIANCE)

Problem: There is no admin view for vitamins subscribers, their packages, or the status of their consultations and prescriptions.

What we need: Admin must see:

- All patients subscribed to a vitamins package, with plan and subscription status.
- Per subscriber: consultations completed, prescription issued or pending.

- Whether the doctor sent the vitamins link to the patient during the post-test consultation (✓ / ✗ with timestamp).

Backend: Admin-accessible view of all vitamins subscriptions with consultation and prescription history. Detect and record when a doctor sends the vitamins link in a consultation.

Frontend (admin): Table with subscriber, plan, consultation status, prescription status, and doctor compliance indicator.

GAP 5 — PRESCRIPTION ROUTING TO PHARMACY

Problem: The prescription PDF auto-sends to the marketer who initiated the consultation. For lab and ads customers, there is no marketer — so the prescription has no destination pharmacy.

What we need:

Path A — Patient came from a pharmacy: Doctor sends the prescription directly to that same pharmacy. No admin needed.

Path B — Patient came from a lab or ads: Admin selects a Labass partner pharmacy from a list and sends the prescription. Admin must see which consultations are waiting for pharmacy assignment.

Backend: Flag pharmacy organizations as “vitamin fulfillment partners”. Allow admin to send a prescription to any partner pharmacy. Allow doctor to send Rx directly to the linked pharmacy (Path A).

Frontend — Doctor app (Path A): Show “أرسل الوصفة للصيدلية” action when consultation source is a pharmacy.

Frontend — Admin (Path B): Show pending prescriptions with no assigned pharmacy; allow admin to pick a partner pharmacy and send.

GAP 6 — RECURRING CONSULTATION ON MONTHLY RENEWAL

Problem: When a vitamins subscription renews, nothing happens. The patient receives no notification and no new consultation is created.

What we need: When a subscription renews, a new consultation is automatically created and the patient receives a WhatsApp prompt to book their monthly consultation.

Backend: On renewal event: create a new consultation and notify the patient.

GAP 7 — SURVEY DATA VISIBLE TO DOCTOR

Problem: The subscribe wizard collects health goals, height, weight, and city. This data is stored only in the browser and never reaches the backend or the doctor.

What we need: The doctor must see this data when accepting the vitamins consultation.

Backend: Store survey answers from the subscribe wizard against the patient's consultation or subscription record.

Frontend (subscribe): Submit survey data to the backend at the payment/confirmation step.

Frontend (doctor app): Display survey answers in the consultation view.

GAP 8 — AUTO-SEND VITAMINS LINK WHEN POST-TEST LAB CONSULTATION CLOSES

Problem: When a post-test lab consultation closes, nothing is sent about vitamins. The doctor must manually remember to send the link.

What we need: Every time a **post-test** lab consultation closes, the system automatically sends the patient the vitamins package link via WhatsApp. This is a safety net in case the doctor forgot. Pre-test consultations are Phase 2 (the vitamins package for pre-test customers will include the lab test — not applicable in Phase 1).

- Post-test message: “بناءً على نتائج تحاليلك، قد تستفيد من برنامج فيتامينات مخصص” + link

Backend: When a post-test lab consultation closes, auto-send vitamins link to patient via WhatsApp.

⚠ Requires an approved WhatsApp message template with Meta before this can run.

GAP 10 — DOCTOR-INITIATED LAB REFERRAL & FREE POST-TEST CONSULTATION

Problem: When a doctor decides a vitamins patient needs blood work (TYPE 2 or TYPE 3 patients have no lab results), there is no in-platform mechanism to request the lab. The doctor has to call the lab manually, and there is no log of the request. When the lab uploads results, the

post-test consultation gets incorrectly deducted from the package.

What we need:

1. **Doctor app:** “إرسال للمختبر” button inside any vitamins consultation. Doctor enters lab name + manager phone number + optional note. System sends a WhatsApp to the lab manager with patient info and logs the referral.
2. **System log:** Every referral records: `lab_referral_id`, `lab_name`, `lab_manager_phone`, `sent_at`, `consultation_id`, `patient_id`, `doctor_name`, `status`.
3. **Org portal — “طلبات التحليل” tab (BUILT — pending backend):** Lab manager sees all incoming referrals. Uploads the results PDF for each pending referral. Clicks “إرسال الاستشارة للدكتور”. System creates the post-test consultation.
4. **Free post-test consultation:** The post-test consultation created from a doctor referral (`/consultations/create-from-referral`) is flagged `freeConsultation = true` — it is **not deducted** from the lab’s bundle or the patient’s vitamins package.
5. **Doctor receives** the post-test consultation as a normal consultation in their feed.

Backend:

- `POST /lab-referrals` — doctor creates a referral (sends WhatsApp to lab manager, logs entry).
- `GET /lab-referrals` — lab portal fetches its incoming referrals.
- `POST /consultations/create-from-referral` — creates a `post_test` consultation with `freeConsultation = true`, links it back to the referral, marks referral as completed.

Frontend (doctor app): Add “إرسال للمختبر” button in the vitamins consultation view (separate doctor-side repo).

Frontend (org portal):  “طلبات التحليل” tab built — awaiting backend endpoints.

GAP 9 — BULK MARKETING CAMPAIGN TO EXISTING USERS

Problem: There is no way to reach existing Labass patients who have not yet subscribed to a vitamins package.

What we need: Admin can trigger a bulk WhatsApp campaign sending the vitamins package link to all patients in the database who do not already have an active vitamins subscription. The system must handle rate limits, track results (sent / failed / skipped), and never re-send to existing subscribers.

Backend: Admin-triggered bulk send with rate limiting and result logging; exclude active vitamin subscribers.

Frontend (admin): Trigger button with confirmation showing the number of users to be contacted; results summary after send.

⚠ Requires a separate approved WhatsApp marketing template with Meta.

Technical Task Breakdown (by Sprint)

| Ordered to ship the 🟡 lab customer flow end-to-end first. Each task references its GAP.

SPRINT 1 — LAB CUSTOMER E2E (🔴 PRIMARY)

#	Task	GAP	Repo	Effort
1.1	Add <code>Vitamins</code> to <code>ConsultationType</code> enum	GAP 2	backend	S
1.2	Add <code>source</code> field + <code>ConsultationSource</code> enum to <code>Consultation</code> entity	GAP 3	backend	S
1.3	Set <code>source</code> automatically at consultation creation (lab → <code>lab_post_test</code> , bundle → <code>org_bundle</code>)	GAP 3	backend	M
1.4	On vitamins subscription activation (payment webhook): auto-create consultation, generate long-lived magic link, send WhatsApp	GAP 1	backend	L
1.5	Update success page — replace “سيتواصل معك فريقنا” with direct consultation link + “يمكنك الدخول في أي وقت”	GAP 1	frontend (patient)	S
1.6	Store survey data (health goals, height, weight, city) to backend on subscribe confirmation	GAP 7	frontend (patient) + backend	M
1.7	Expand doctor feed relations to include <code>subscription</code> , <code>subscription.bundle</code> , <code>source</code> , survey data, and lab results PDF from linked consultations	GAP 3	backend	M
1.8	Doctor app — show vitamins badge, source label, subscription status, survey answers, lab results PDF on consultation card/detail	GAP 3	frontend (doctor)	M
1.9	Auto-send vitamins WhatsApp link when a post-test lab consultation closes	GAP 8	backend	S
1.10	Submit WhatsApp template <code>vitamins_marketing_post_test</code> to Meta for approval	GAP 8	ops	S
1.11	Add <code>isVitaminPartner</code> flag to <code>Organization</code> entity	GAP 5	backend	S
1.12	<code>POST /admin/send-prescription-to-pharmacy</code> + <code>GET /admin/partner-pharmacies</code> endpoints	GAP 5	backend	M
1.13	Admin dashboard — subscriber list with plan, source, consultation status, prescription status, pharmacy assignment	GAP 4 + 5	frontend (admin)	L

#	Task	GAP	Repo	Effort
1.14	Lab referral backend: <code>POST /lab-referrals</code> , <code>GET /lab-referrals</code> , <code>POST /consultations/create-from-referral</code> (free post-test)	GAP 10	backend	L

SPRINT 2 — PHARMACY FLOW + DOCTOR TOOLING (🟡 SECONDARY)

#	Task	GAP	Repo	Effort
2.1	Skip bundle deduction when <code>consultationType === "vitamins"</code> in <code>createConsultationFromBundle</code>	GAP 2	backend	S
2.2	Org portal — add “فيتامينات” option in DoctorTypeSection with “مجانية ولا تُخصم من باقتك” note	GAP 2	frontend (patient/orgPortal)	S
2.3	Set <code>source: pharmacy_vitamins</code> when pharmacy sends a vitamins consultation	GAP 3	backend	S
2.4	Doctor app — “أرسل الوصفة للصيدلية” button for pharmacy-source consultations	GAP 5	frontend (doctor)	M
2.5	Doctor app — “إرسال للمختبر” button: enter lab name + manager phone, sends WhatsApp, logs referral	GAP 10	frontend (doctor) + backend	M
2.6	Admin dashboard — doctor compliance column:  vitamins link sent /  not sent (detect via <code>vitamin-LinkSentAt</code> on Consultation)	GAP 4	backend + frontend (admin)	M
2.7	On monthly renewal webhook: auto-create new consultation + send WhatsApp reminder to patient	GAP 6	backend	M

SPRINT 3 — GROWTH & MARKETING (🟢)

#	Task	GAP	Repo	Effort
3.1	<code>POST /admin/marketing/send-vitamins-campaign</code> — bulk WhatsApp to all non-subscriber patients, rate-limited, with result logging	GAP 9	backend	L
3.2	Admin UI — campaign trigger button with user count confirmation + results summary	GAP 9	frontend (admin)	M
3.3	Submit WhatsApp template <code>vitamins_marketing_campaign</code> to Meta for approval	GAP 9	ops	S

Effort key: S = small (< 1 day), M = medium (1–2 days), L = large (3+ days)

Business Deals Required

These agreements must be in place before the technical flow can operate.

#	Deal	Unlocks	Status Needed Before
1	Lab subscription agreements — Labs pay Labass for a consultation bundle. Each post-test result generates a consultation via the bundle.	● Lab customer flow	Sprint 1
2	Partner pharmacy fulfillment agreement — جدار (Jadar) is the first partner pharmacy. Jadar is registered in the system as a pharmacy so the admin can send prescriptions and patient information directly to them. Additional pharmacies can be added later. Must define: delivery area, turnaround time, revenue share or wholesale price.	● Lab + ● Ads (Rx delivery — GAP 5)	Sprint 1
3	Vitamin supplier / product agreement — Agreement with the vitamins manufacturer or distributor. Defines which products can be prescribed, pricing, and supply chain. Without this, doctors cannot prescribe specific products.	● All flows	Sprint 1
4	Pharmacy referral agreement — Pharmacies agree to use the Labass org portal to send free vitamins consultations as referrals to their customers. Must clarify: who onboards pharmacies, bundle pricing, terms of the free referral consultation.	● Pharmacy flow (GAP 2)	Sprint 2
5	WhatsApp Business template approvals — Meta must approve two marketing templates: <code>vitamins_marketing_post_test</code> (sent when post-test closes) and <code>vitamins_marketing_campaign</code> (bulk campaign). Approval takes 1–3 business days.	● GAP 8 (template 1), ● GAP 9 (template 2)	Sprint 1 (template 1), Sprint 3 (template 2)
6	SFDA / MOH compliance — Confirm whether an e-prescription is sufficient for vitamin dispensing or if physical pharmacy verification is required.	● All prescription flows	Before any prescription is sent to a pharmacy
